Elements of Gasdynamics - Oxford Scholarship

This chapter presents the general features of traditional gas dynamics, deduced from the ideal gas model assuming no reaction and constant specific heats. Examples are given including one-dimensional isentropic flows, shock waves, and boundary layers. In the framework of these examples, various flow configurations are considered such as expanding flows in nozzles, kinematics of shock waves ...

Elements of Gasdynamics, by H. W. LLEPMANN and A. ROSHKO. The term gas dynamics, which Liepmann and Roshko have chosen to combine into a single word, is now widely used to denote that area of fluid physics which deals with compressible flow and includes some of the more basic applications to aerodynamics. It is perhaps not more than a decade
