power, so the valve is actually controlled by an electric signal.

Other hydraulic actuators rely on a separate fluid power system (pump, reservoir, cooler, hand or solenoid valves, etc.) to provide hydraulic pressure on which to operate.

Fluid Power

Actuators And

Control Systems

Fluid power systems are those that transmit and control power through use of a pressurized fluid (liquid or gas) within an enclosed circuit. Types of symbols commonly used in drawing circuit diagrams for fluid power systems are Pictorial, Cutaway, and Graphic. These symbols are fully explained in the

Hydraulic Actuators - A

hydraulic actuator uses hydraulic power to perform a mechanical

operation. They are actuated by a cylinder or fluid motor. The

mechanical motion is converted to rotary, linear, or oscillatory

motion, according to the need of the IoT device. Ex-

construction equipment uses hydraulic actuators
