History Internal combustion engines date back to 1876 when Otto first developed the spark-ignition engine and 1892 when Rudolf Diesel invented the compression-ignition engine. Since that time these engines have continued to develop as our knowledge of engine processes has increased, as new technologies became available, as demand for new types of engine arose, and as environmental constraints ...

1. Hit and miss governing. In this system of governing, whenever the engine starts running at higher speed (due to decreased load), some explosions are omitted or missed. This is done with the help of a centrifugal governor. This method of governing is widely used for I. C. engines of smaller capacity or gas engines. 2. Qualitative governing.

The term "Governing" means the action of varying the fuel supply in accordance with the load demand so that the engine runs at practically constant speed. Below are the some important methods of governing of internal combustion engines. 01) Hit & Miss Governing-This method is suitable for small gas engines.In this, the rotational motion of the cam actuates the rocker through the roller.

Governing Methods Of Internal Combustion Engines.
