While modern books are born digital, books old enough to be in the public domain may never have seen a computer. Google has been scanning books from public libraries and other sources for several years. That means you've got access to an entire library of classic literature that you can read on the computer or on a variety of mobile devices and eBook readers.

If we substitute  $3E$  for  $D$  in the triangle equation, we get  $C + E + 3E = 180$ , or  $C + 4E = 180$ . Rearrange that just a little, so it reads  $C = 180 - 4E$ . Now we can plug in for  $C$  in our original ...

A triangle is a polygon with three edges and three vertices. It is one of the basic shapes in geometry. A triangle with vertices A, B, and C is denoted  $\triangle ABC$ . In Euclidean geometry, any three points, when non-collinear, determine a unique triangle and simultaneously, a unique plane (i.e. a two-dimensional Euclidean

The angle pairs  $\{1, 2\}$ ,  $\{4, 7\}$ ,  $\{5, 8\}$ , and  $\{3, 6\}$  are corresponding angles—you can remember these because they form a sort of “F” shape—whether upside-down, reversed, or both! The angle pairs  $\{1, 5\}$  and  $\{4, 6\}$  are alternate exterior angles. These lines are only parallel if: alternate interior angles are congruent
