Mechanic Study Guide Brakes Braking

Automotive brakes are designed to slow and stop a vehicle by transforming kinetic energy(motion energy) into heat energy. As the brake linings contact the drums/rotors they create friction which produces the heat energy. The intensity of the heat is proportional to the vehicle speed, the weight of the vehicle, and the quickness of the stop.

Automotive Brakes - Study Guide

A vehicle with disc/drum brakes requires excessive brake pedal effort to stop. The brake pedal is firm when applied. While starting the engine with the brakes applied, the pedal does not go down slightly. Technician A says excessive brake pedal freeplay could be the cause. Technician B says air trapped in the hydraulic system could be the cause.

Free ASE A5 Test Questions - A5 Brakes - Official Study Guides

The braking power of spring brakes depends on the brakes being in adjustment. If the brakes are not adjusted properly, neither the regular brakes nor the emergency/parking brakes will work right. In newer vehicles with air brakes, you put on the parking brakes using a diamond-shaped, yellow, push-pull control knob.
