**Brief Introduction to Problem Solving**  
From the outset, you should be keenly aware that it is rare that a problem can be solved using all 10 strategies we present here. Similarly, it is equally rare that only a single strategy can be used to solve a given problem. Rather, a combination of strategies is the most likely occurrence when solving a problem.

Step 4: Solve the problem. Now all we have to do is solve our problem. Like with any problem, we can solve this one by following the order of operations.  $f$  is already alone on the left side of the equation, so all we have to do is calculate the right side.  $f = 1/2 \cdot 8 + 25$ . First, multiply  $1/2$  by  $8$ .  $1/2 \cdot 8$  is  $4$ .  $f = 4 + 25$ . Next, add  $4$  and  $25$ .

A heuristic is another type of problem solving strategy. While an algorithm must be followed exactly to produce a correct result, a heuristic is a general problem-solving framework (Tversky & Kahneman, 1974). You can think of these as mental shortcuts that are used to solve problems. A "rule of thumb" is an example of a heuristic.
