Exploration Guide: Simple Harmonic Motion

Simple harmonic motion (SHM) is the motion of an object subject to a force that is proportional to the

Where To Download Student Exploration

object's displacement. One example of SHM is the motion of a mass attached to a spring. In this case, the relationship between the spring force and the displacement is given by Hooke's Law, $F = -kx$, where k is the spring constant, x is the displacement from the equilibrium length of the spring, and the minus sign indicates that the force opposes the displacement.
